Development · Automation · Integration - AI

Sergio Alejandro Hernández Patiño

Software Analyst and Developer

.NET · Power Platform · AI

Cali, Colombia alejandro.dev.sergio@outlook.com +57 312 856 0843 LinkedIn GitHub

+6 Years of experience building business solutions

Over six years connecting business, data and software.

My career began with backend service development and grew into technology consulting and team leadership. That journey has given me an end-to-end perspective: understanding a need, designing the solution and taking it through to production.

I work with .NET, Power Platform and artificial intelligence to turn business needs into applications, automation and integrations. I combine analysis, architecture and development with testing and application lifecycle management (ALM) to take solutions into production and support their evolution.

Specialties: .NET · Power Platform · AI

Business applications, automation and integrations.

What I build: End-to-end solutions

Applications and services, from analysis to production deployment.

How I work: Business understanding and ALM

Requirements, architecture, testing and software evolution.

Technology that works for your business

Software and integrations

C# & .NET

I build applications and services that connect systems and data, combining C#, .NET, SQL Server and Azure to solve integration and business development challenges.

C# · .NET · SQL Server · Azure App Services · Azure Functions · Azure Storage

Applications and automation

Microsoft Power Platform

I turn business needs into intuitive applications and automated workflows, bringing data, teams and Microsoft 365 tools together in one solution.

Power Apps · Power Automate · Power Automate Desktop · Dataverse · Power Pages · Power BI

Microsoft 365 SharePoint · Teams · Outlook · OneDrive · Excel · Planner

AI development and integration

Artificial intelligence

I integrate AI into applications and automation, and use assistants to support analysis, development and documentation. I combine generative AI, large language models (LLMs) and API integration with technical review of the results.

Generative AI · LLM · AI APIs · AI automation

AI assistants Microsoft Copilot · ChatGPT · Claude · Gemini

Cross-functional skills

Frontend

Angular, JavaScript, TypeScript, HTML5 and CSS3.

APIs and integration

REST APIs, JSON and OAuth 2.0 authentication.

Sergio Alejandro Hernández Patiño

Software Analyst and Developer

SQL and NoSQL data

SQL Server, MySQL and MongoDB (NoSQL).

Application lifecycle management (ALM)

Analysis, design, development, testing, deployment, documentation and support.

Technical leadership

Requirements analysis, solution design and team coordination.

Backend and development tools

Node.js, Git and GitHub.

Professional experience

End-to-end development · ALM: An end-to-end view of the software lifecycle

I support solution development from requirements definition through production deployment. I connect business analysis, architecture, implementation and quality with version control, documentation and support to keep applications useful, stable and ready to evolve.

Requirements · Design and architecture · Development and integration · Testing and validation · Deployment and documentation · Support and evolution

DynamizaTIC

2025-2026 · Spain

Software Analyst and Developer

- Turned business needs into applications with Power Apps and Dataverse and automated processes with Power Automate.
- Connected external systems through REST APIs and Azure services.
- Led solutions from requirements gathering through implementation and user adoption.

Auto Control Empresarial

2023 - 2025 · Spain

Director of Development

- Coordinated the technical team and defined the development strategy to turn ideas into business solutions.
- Designed and implemented architectures with Microsoft 365, Power Platform and Azure to integrate systems and support their growth.

Intelecto

2021 - 2023 · Colombia

Development Consultant

- Developed applications with Power Apps and .NET; automated processes with Power Automate.
- Turned data into Power BI dashboards and reports to make analysis easier.

CODESA

2020 - 2021 · Colombia

Software Analyst and Developer

- Developed backend services in a microservices architecture.
- Worked with Oracle and PL/SQL to manage business data.

Education and languages

Technology degree in Software Analysis and Development (ADSI)

Servicio Nacional de Aprendizaje (SENA) · 2019 - 2021

Spanish Native · English B1 Intermediate
